Australia to Purchase Second Triton UAV

CANBERRA, Australia –The Australian government has agreed to purchase a second MQ-4C Triton, Northrop Grumman Corp., manufacturer of the aircraft, said in a release.

Australia's 2016 Defence White Paper identified the requirement for seven high-altitude, long-endurance Triton unmanned aircraft. Northrop Grumman will deliver the Triton through a cooperative program with the U.S. Navy.

"Northrop Grumman is excited to develop this unrivaled capability for the Royal Australian Air Force," said Doug Shaffer, vice president and program manager for the Triton at the company. "Triton will provide the Australian Defence Force a high-altitude, long-endurance system for intelligence, reconnaissance and broad-area surveillance missions to enhance the security of Australia's borders."

Defence Minister Christopher Pyne identified "people smuggling and the exploitation of our natural resources" as threats that Triton's capabilities can help to address.

Minister for Defence Industry Linda Reynolds identified the opportunities this program will create for Australian industry and said that "there will be significant opportunity for Australian industry to share in billions of dollars of system maintenance and network management functions."

Northrop Grumman is committed to developing a sovereign defense capability for Australia through industrial partnership and participation, direct investment and technology transfer, the company said.
