

# USCGC Oliver Berry Returns Home Following 46-day Operation Blue Pacific Patrol in Oceania

A U.S. Coast Guard boat crew and boarding team from U.S. Coast Guard Cutter Oliver Berry (WPC 1124) approaches a foreign fishing vessel to conduct a joint boarding inspection with members of the Western and Central Pacific Fisheries Commission on the high seas in Oceania, Sept. 22, 2024. (U.S. Coast Guard)

From Coast Guard District 14 External Affairs, Oct. 1, 2024

HONOLULU – The crew of Coast Guard Cutter Oliver Berry (WPC 1124) returned to Honolulu Friday after completing a 46-day patrol in Oceania.

The Oliver Berry crew departed Coast Guard Base Honolulu in August and traveled more than 7,600 nautical miles from the Hawaiian Islands to the west coast of Fiji. The crew conducted the patrol in support of Operation Blue Pacific, Coast Guard District 14's overarching, multi-mission endeavor promoting security, safety, sovereignty, and economic prosperity in Oceania.

The crew's efforts included enhancing maritime domain awareness, combatting illegal fishing activities across Oceania, and strengthening relationships with partners in the region. During Oliver Berry's patrol, the cutter's crew enacted two bilateral maritime law enforcement agreements with Fiji and Samoa.

While in Fiji, the crew exercised the shiprider provision of the bilateral maritime law enforcement agreement by hosting local law enforcement officers from the Fiji Revenue and Customs Service, Ministry of Fisheries, and the Navy, who conducted boardings in Fiji's archipelagic waters. The shipriders patrolled both the east and northwestern side of Fiji near the Yasawa Island chain group. While aboard the Oliver Berry, the shipriders conducted 35 boardings on recreational vessels, sailing vessels, and commercial fishing vessels, allowing Fiji to monitor and protect their archipelagic waters from potential illicit maritime activity.

Following operations in Fiji, the cutter patrolled in the vicinity of Samoa, exercising an enhanced bilateral maritime law enforcement agreement for the first time to detect and monitor vessels actively engaged in fishing in their Exclusive Economic Zone.

Additionally, the Oliver Berry crew conducted two Western and Central Pacific Fisheries Commission boardings in the Convention Area to identify and counter illegal, unreported, and unregulated fishing activity.

During their patrol, the cutter's crew moored in Pago Pago, American Samoa, Nadi, Fiji, and Apia, Samoa. In Apia, the crew participated in multiple community relations events, including subject matter exchanges with the First Canoe Club and the Paddling Club. During a [Partnership in Education](#) event at a local school, the Oliver Berry crew held a first aid and CPR demonstration, demonstrating basic life-saving techniques. The crew also hosted the entire Samoa School of Maritime Training to show the students life on the Oliver Berry and convey the cutter's capabilities.

"The crew of the Oliver Berry was grateful for the opportunity to operate with our counterparts in Oceania," said Lt. Jasen Kingsley, commanding officer of the Oliver Berry. "We look forward to strengthening our partnerships in the future, as these relationships are essential to maintaining maritime safety, security and stewardship. This patrol would not have been possible without the outstanding preparations, efforts, time and dedication of all the crew, as well as the support from their families."

Commissioned in 2017, the Oliver Berry is one of six Fast Response Cutters stationed across the Coast Guard's Fourteenth District. The crew provides year-round search and rescue and maritime law enforcement coverage across a 15-million square mile area of responsibility, demonstrating the U.S. Coast Guard's enduring commitment to our partner nations across Oceania.

## **Navy Accepts Delivery of Ship**

# to Shore Connector, LCAC 110

The U.S. Navy accepted the delivery of the latest Ship to Shore Connector (SSC), LCAC 110, from Textron Systems on Sept. 6. (Textron)

By Team Ships Public Affairs, Sept. 6, 2024

New Orleans, Louisiana – The U.S. Navy accepted the delivery of the latest Ship to Shore Connector (SSC), LCAC 110, from Textron Systems on Sept. 6. This new addition to the fleet signifies a substantial enhancement in the Navy’s amphibious capabilities, providing a vital asset for rapid deployment and logistical support.

The delivery of LCAC 110 comes after completion of Acceptance Trials conducted by the Navy’s Board of Inspection and Survey, which tested the readiness and capability of the craft to effectively meet its requirements.

“This new craft will provide the Navy and Marine Corps team with unparalleled capability in amphibious warfare, ensuring

we remain agile and responsive to emerging threats and global challenges,” said Capt. Jason Grabelle, program manager for Amphibious Assault and Connectors Programs, Program Executive Office (PEO) Ships. “The introduction of LCAC 110 into our fleet marks a significant milestone in our ongoing efforts to maintain and enhance operational readiness.”

LCACs are built with configurations, dimensions, and clearances similar to the legacy LCACs they replace – ensuring that this latest air cushion vehicle is fully compatible with existing, well deck-equipped amphibious ships, the Expeditionary Sea Base and the Expeditionary Transfer Dock. LCACs are capable of carrying a 60 to 75-ton payload. They primarily transport weapon systems, equipment, cargo, and assault element personnel through a wide range of conditions, including over-the-beach.

Textron Systems is currently in serial production on LCACs 111-123.

PEO Ships, one of the Department of Defense’s largest acquisition organizations, is responsible for executing the development and procurement of all destroyers, amphibious ships and craft, auxiliary ships, special mission ships, sealift ships and support ships.

---

## **U.S. Navy Accepts Delivery of Future USS Beloit (LCS 29)**

The future USS Beloit transits Lake Michigan during Acceptance Trials, August 21, 2024. Beloit is the first Navy warship named in honor of the city of Beloit, Wisconsin.

By Program Executive Office Unmanned and Small Combatants (PEO USC) Public Affairs, Oct. 1, 2024

MARINETTE – The U.S. Navy accepted delivery of the future USS Beloit (LCS 29) from Lockheed Martin at the Fincantieri Marinette Marine shipyard in Marinette, Wisconsin, Sept. 30. Beloit is the 15th Freedom-variant Littoral Combat Ship and the 29th in the LCS class. She is also the first Navy warship named in honor of the city of Beloit, Wisconsin.

“Beloit is another shining example of what it means to finish strong,” said Capt. Matthew Lehmann, program manager of the Littoral Combat Ship program office. “Our industry partners stood up to the challenge to deliver this ship on an aggressive schedule. Beloit’s delivery is helping the Navy to put more players on the field.”

The LCS class consists of fast, optimally manned, mission-tailored small surface combatants capable of operating in both

near-shore and open-ocean environments to address 21st-century coastal threats.

Beloit successfully completed her Acceptance Trials in August 2024, marking the final milestone before delivery to the Navy. During these trials, the Navy conducted comprehensive testing of LCS 29's systems across multiple functional areas essential to performance at sea – including combat systems, main propulsion, auxiliaries and electrical systems. These successful trials paved the way for delivery, and the Navy will continue post-delivery certifications and qualifications to ready her for Fleet operations. After commissioning, scheduled for later this year, Beloit will be homeported in Mayport, Florida.

LCS 29 is equipped with the Freedom-class combining gear correction, which will enable unrestricted operations. This correction addresses a class-wide issue that was identified as the Fleet deployed Freedom-variant LCS in greater numbers.

Following Beloit, the future USS Cleveland (LCS 31) – the final Freedom-variant LCS – is in the final stages of construction at Fincantieri Marinette Marine, with delivery scheduled in 2025.

The LCS class consists of two variants, Freedom and Independence, designed and built by two separate industry teams. The trimaran-hulled Independence-variant team is led by Austal USA (for the even-numbered ships). The monohull Freedom variant is built by a team led by Lockheed Martin (for the odd-numbered ships).

The Navy's Littoral Combat Ship program is a part of the Program Executive Office, Unmanned and Small Combatants portfolio, which designs, develops, builds, and delivers the Navy's unmanned maritime systems, mine warfare systems, special warfare systems, expeditionary warfare systems, and small surface combatants.

# **Sept. 30 U.S. Central Command Update**

From U.S. Central Command

Sept. 30, 2024

TAMPA, Fla. - In the past 24 hours, U.S. Central Command (USCENTCOM) forces successfully destroyed six Iranian-backed Houthi uncrewed aerial vehicles (UAVs) in a Houthi-controlled area of Yemen.

It was determined these UAVs presented an imminent threat to U.S. and coalition forces, and merchant vessels in the region. This action was taken to protect freedom of navigation and make international waters safer and more secure for U.S., coalition, and merchant vessels.

## **U.S. Coast Guard Encounters Joint Chinese Coast Guard, Russian Border Guard Patrol in Bering Sea**

An HC-130J Super Hercules airplane crew from Coast Guard Air Station Kodiak observes two Russian Border Guard ships and two Chinese Coast Guard ships approximately 440 miles southwest of St. Lawrence Island Sept. 28, 2024. This marked the northernmost location where Chinese Coast Guard vessels have been observed by the U.S. Coast Guard. (U.S. Coast Guard courtesy photo)

From U.S. Coast Guard 17<sup>th</sup> District, Oct. 1, 2024

JUNEAU, Alaska – The U.S. Coast Guard located four vessels from the Russian Border Guard and Chinese Coast Guard conducting a joint patrol in the Bering Sea, Saturday.

While patrolling the maritime boundary between the United States and Russia on routine patrol in the Bering Sea, a HC-130J Super Hercules airplane crew from Coast Guard Air

Station Kodiak observed two Russian Border Guard ships and two Chinese Coast Guard ships approximately 440 miles southwest of St. Lawrence Island.

The vessels were transiting in formation in a northeast direction, remaining approximately five miles inside the Russian Exclusive Economic Zone. This marked the northernmost location where Chinese Coast Guard vessels have been observed by the U.S. Coast Guard.

“This recent activity demonstrates the increased interest in the Arctic by our strategic competitors,” said Rear Adm. Megan Dean, commander of the 17th Coast Guard District. “The demand for Coast Guard services across the region continues to grow, requiring continuous investment in our capabilities to meet our strategic competitors’ presence and fulfill our statutory missions across an expanding operational area.”

The HC-130 aircrew operated under Operation Frontier Sentinel, an operation designed to meet presence with presence when strategic competitors operate in and around U.S. waters. The Coast Guard’s presence strengthens the international rules-based order and promotes the conduct of operations in a manner that follows international law and norms.

## **Navy Exceeded FY24 Recruiting Goals**

From the Navy Office of Information, Oct. 1, 2024

MILLINGTON, Tenn. (October 1, 2024) – The U.S. Navy exceeded its Fiscal Year 2024 recruiting goals, contracting 40,978 new recruits by the end of the fiscal year and marking its most

significant recruiting achievement in 20 years.

Secretary of the Navy Carlos Del Toro visited Millington, Tennessee, today to meet with Navy Recruiting Command leadership, recruiters, and support personnel. During the visit, he expressed his gratitude for their hard work and dedication.

“I know you work incredibly hard as recruiters, and this can be an exhausting set of orders, but that is why we only select the best Sailors for recruiting duty,” said Secretary Del Toro. “You truly make a difference in assuring the future of our Navy. The Sailors you recruited this year will form the backbone of our Fleet for several decades.”

For FY24, the Navy not only met its contracting goals without lowering targeted objectives, it also exceeded retention goals. Once again, this fiscal year the Marine Corps exceeded its recruitment goals for both officers and enlisted.

While the Navy achieved its FY2024 recruiting goals, some recruits are slated to attend boot camp in FY2025, which is when the schoolhouse can accommodate them.

The Navy’s recruiting success is attributed to several factors including data-driven decision-making, enhanced focus on annual goals, reduced timeframe for processing medical waivers, removing red tape, and expanding opportunities.

Over the past year, the Navy identified and closed gaps in the recruiting process. For example, the CNO established a culture of “Every Sailor a Recruiter” and advanced our recruiting enterprise by appointing a senior, two-star admiral to lead our recruiting stations and centers. Furthermore, recruiter goals were adjusted from monthly to annual to promote steady-state performance.

The Navy also stood up a Recruiting Operations Center to monitor recruiting efforts in real time, increase production

and remove variance among 26 Talent Acquisition Groups. The new center streamlined processes to expedite newly contracted recruits to boot camp.

The Navy increased the number of specialties that new Sailors are eligible for, including the new robotics rating, and implemented the Future Sailor Prep Course to provide more opportunities for aspiring Sailors.

“The Navy is focused on thoughtfully increasing recruiting numbers while maintaining historically high retention rates,” said Secretary Del Toro. “We are doing this by improving the efficiency of our recruiting enterprise and expanding the pool of applicants who can join our team.”

The Navy’s recruiting success in FY2024 is a testament to the dedication of its recruiters and the appeal of service in the Navy. The Navy offers a wide range of opportunities for young men and women to serve their country, gain valuable skills, and build a rewarding career.

The U.S. Navy is the largest, most capable, and most technologically advanced naval force in the world. The Navy’s mission is to maintain, train, and equip combat-ready naval forces capable of winning wars, deterring aggression, and maintaining freedom of the seas.

---

## **USCGC Northland Returns Home After 67-day Patrol to**

# Support Operation Nanook

Coast Guard Cutter Northland (WMEC 904) crew members and an Air Station Cape Cod MH-60 Jayhawk helicopter aircrew conduct a medevac of an injured fisherman, Sept. 18, 2024, while underway in the Atlantic Ocean. The Coast Guard transported the fisherman to a higher level of care. (U.S. Coast Guard photo by Petty Officer 3rd Class Anthony Randisi)  
From U.S. Coast Guard Atlantic Area, Oct. 1, 2024

PORTSMOUTH, Va. – The crew of the Coast Guard Cutter Northland (WMEC 904) returned to their homeport of Portsmouth, Saturday, following a 67-day deployment in the North Atlantic Ocean and Arctic region.

Northland's patrol of the high northern latitudes directly supported the U.S. Coast Guard's Arctic Strategy and strengthened international relations with allies during Operation Nanook Tuugaalik 2024, a Canadian-led military

exercise committed to furthering safety and sustainability of the Arctic region.

“This deployment has been an incredible experience for the crew of Northland,” said Cmdr. Brian Gismervik, commanding officer of Northland. “Our participation alongside Arctic region partners has emphasized the importance of these operations and showcased the powerful capabilities a combined force can bring to address the evolving challenges and opportunities in the rapidly changing high-latitude environment.”

While deployed, Northland’s crew conducted training operations with the Royal Canadian Navy, Danish Royal Navy, and U.S. Navy to include live-fire gunnery exercises, towing and formation steaming, medical facility open houses, and cross-deck trainings in maritime law enforcement, engineering, and deck operations.

Northland’s crew also conducted Northwest Atlantic Fisheries Organization (NAFO) living marine resources (LMR) inspections alongside fisheries officers from the Canadian Department of Fisheries and Oceans as well as U.S. Coast Guard District 1 LMR boardings, combating illegal, unreported and unregulated fishing (IUU-F) firsthand, culminating in over 50 hours and four violations.

The Northland’s crew sailed more than 8,500 nautical miles while strengthening ties with partner nations through a series of port calls. Northland’s crew visited Halifax, Nova Scotia, Canada, transiting alongside the Canadian Royal Navy HMCS Margaret Brooke (AOPV 431), Royal Danish Navy HDMS Lauge Koch (P572), and U.S. Navy Arleigh Burke-class guided-missile destroyer USS Delbert D. Black (DDG 119) toward high-northern latitudes, where the Northland and Delbert D. Black traveled through the Nuup Kangerlua Fjord, near Nuuk, Greenland. Afterward, the Northland steamed to St. John’s, Newfoundland, Canada, before returning to the United States.

On Sept. 18, Northland launched a small boat crew in response to a report of a commercial fisherman who suffered broken ribs. Coordinating with the fishing vessel, Coast Guard First District watch standers and a Coast Guard Air Station Cape Cod aircrew, the boat crew embarked the man aboard, transited with him back to the Northland and conducted a medevac aboard an Air Station Cape Cod MH-60 Jayhawk helicopter to a higher level of care facility.

Northland is the fourth Famous-class medium endurance cutter in the Coast Guard fleet, homeported in Portsmouth, Virginia. The medium endurance cutters execute many missions to include search and rescue, law enforcement, drug and migrant interdiction, homeland security, and defense operations. Northland is under the command of U.S. Coast Guard Atlantic Area. Based in Portsmouth, Virginia, U.S. Coast Guard Atlantic Area oversees all Coast Guard operations east of the Rocky Mountains to the Arabian Gulf.

For information on how to join the U.S. Coast Guard, visit [GoCoastGuard.com](https://www.goatguard.com) to learn about active duty and reserve, officer and enlisted opportunities. Information on how to apply to the U.S. Coast Guard Academy can be found [here](#).

## **Cruiser USS Antietam is Decommissioned**

The crew departs the ship for the last time during the decommissioning ceremony of Ticonderoga-class guided-missile cruiser USS Antietam (CG 54).

Story By LaDonna Singleton, Commander, Naval Surface Forces Public Affairs, Sept. 27, 2024

HONOLULU (September 27, 2024) – Ticonderoga-class guided-missile cruiser USS Antietam (CG 54) was recognized for its more than 37 years of naval service during a decommissioning ceremony at Joint Base Pearl Harbor-Hickam, Hawaii, on September 27.

During the ceremony guest speaker Rear Adm. Christopher Moe (USN, Ret.) spoke about Antietam's history and accomplishments, wishing this final crew fair winds and following seas as they bid farewell to their ship.

Moe served as Antietam's commanding officer from 1997 to 1999. "I was there June 6, 1987, when USS Antietam was commissioned in Baltimore, Maryland. The ceremony was a magnificent start to 37 years of service that will end today after thousands of

young men and women crossed her quarterdeck, anxious to serve this great nation," he stated. "This is a remarkable ship and of equal importance is a crew who can only do what they do because they have the love and support of the families at home."

CG 54's last Commanding Officer, Cmdr. Victor J. Garza reflected on the service of his crew and those who came before him. "The soul of Antietam is in her Sailors. We bring the heartless steel and iron to life. Today, we lay her to rest. We keep the soul, and until the Navy commissions a fourth USS Antietam, I will be the captain of her soul. We will always be Antietam."

During his speech, Garza recognized the 23 former Antietam commanding officers who attended the ceremony. He also congratulated the two newly pinned chief petty officers, Chief Fire Controlman Daniel Delgado and Chief Fire Controlman Robin Phillips. Delgado and Phillips were promoted in the ship's final Chiefs pinning ceremony earlier the same day. Garza also conducted the final ship's promotion earlier in the day for now Lt. Cmdr. Steve Millet, a former crew member, on the bow. Antietam maintained a crew of 40 officers and 300 enlisted Sailors throughout its service.

CG 54 was named for the site of the 1862 Battle of Antietam, Maryland, between Confederate forces under Gen. Robert E. Lee and Union forces under Maj. Gen. George McClellan, during the American Civil War.

Taking place on September 17, 1862, the Battle of Antietam remains the bloodiest day in American history, with a tally of 22,727 dead, wounded, or missing on both sides. Although the Union Army suffered heavier casualties than the Confederates, the battle was a major turning point in the Union's favor.

The first USS Antietam was a screw sloop of war and

construction began in 1864 at the Philadelphia Navy Yard. Due to the end of the Civil War, the ship was not completed as initially planned. Instead, it remained partially built until 1869, when it was decided to finish it as an equipment storeship. This Antietam served as a storeship and marine barracks at League Island, Pennsylvania, from 1876 to 1888.

The second USS Antietam was an Essex-class aircraft carrier commissioned towards the end of World War II. Launched on August 20, 1944, and commissioned on January 28, 1945, this vessel missed the war but played significant roles in the Korean War, and in Cold War operations. Notably, it was the first aircraft carrier to be fitted with an angled flight deck, enhancing its operational capabilities.

The decommissioning of Antietam supports department-wide business process reform initiatives to free up time, resources, and manpower in support of increased lethality.

The mission of CNSP is to man, train, and equip the Surface Force to provide fleet commanders with credible naval power to control the sea and project power ashore.

## **RTX Receives U.S. Navy Contract for ESSM Block 2 Missiles**

*Multi-mission weapon system will provide increased flexibility and capability for U.S. and allied navies*

From RTX

TUCSON, Ariz. (September 30, 2024) – Raytheon, an RTX (NYSE: RTX) business, has received a \$525 million contract from the U.S. Navy to produce ESSM Block 2 missiles and spares for the U.S. and allied nations.

ESSM Block 2 is a short to medium-range, ship-launched, dual-mode, guided missile that has increased maneuverability and improved performance over its Block 1 predecessor.

“The role of self-ship and local area defense has become increasingly important, and ESSM Block 2 delivers critical capability in this mission,” said Barbara Borgonovi, president of Naval Power at Raytheon. “By partnering with the U.S. Navy and allied navies, we’re ensuring this versatile system is ready to support our fleets around the world.”

The newest ESSM variant reduces dependence on shipboard illumination and is integrated on a wide variety of combat systems and launchers, delivering improved performance in

stressing marine environments, and has significant digital processing margin to keep pace with evolving threats through software improvements.

Leveraging learning from other active seeker systems – such as AMRAAM and Standard Missile 6 – RTX is using common hardware and factory processes across multiple missile platforms to enable cost savings and increased production capacity. Additionally, the consortium continues to invest in test infrastructure and material to keep capacity ahead of demand and accelerate deliveries.

ESSM is managed by the NATO SEASPARROW Consortium composed of 12 nations: Australia, Belgium, Canada, Denmark, Germany, Greece, the Netherlands, Norway, Portugal, Spain, Türkiye, and the United States. The consortium is NATO's largest and most successful cooperative weapons project and represents over 50 years of international military-industrial cooperation.

## **NOAA Awards Contract for Next-Generation Hurricane Hunter Aircraft**

*Artist's rendering of a NOAA C-130J Hercules hurricane hunter.*  
*Credit: NOAA*

By Jonathan Shannon, NOAA, September 27, 2024

Today, NOAA announced that it has awarded a contract to Lockheed Martin Aeronautics, based in Georgia, for two specialized C-130J Hercules aircraft to become the next generation of NOAA hurricane hunter aircraft. The four-engine aircraft is a proven platform for hurricane reconnaissance. The planes will be modified to serve as flying laboratories in support of NOAA's hurricane and environmental research.

"NOAA is continuing to make critical investments to help protect lives and property," said NOAA Administrator Rick Spinrad, Ph.D. "These new aircraft will be filled with state-of-the-art technology developed by NOAA and our partners, greatly enhancing our ability to gather critical data on hurricanes, atmospheric rivers and our changing climate."

Funded in part by the [2023 Disaster Relief Supplemental Appropriations Act](#), the fully-instrumented aircraft are expected to join NOAA's fleet in 2030. They will replace the long-serving WP-3D Orions, which have operated since the mid-1970s.

The contract covers acquisition of two C-130J Hercules aircraft and the NOAA-specific design efforts, with options for additional aircraft. With demand for specialized weather data continuing to grow from the research and emergency response communities, modernizing NOAA's aircraft fleet is critical to delivering on these future operational and science demands.

When aircraft data are available, hurricane track and intensity forecasts are improved by more than 15-20% in track accuracy and 10-15% in intensity forecasts. Longer lead-time for tropical cyclone forecasts are imperative as coastal populations and infrastructure continue to grow and evacuation decision times increase.

"Adding these highly capable C-130J aircraft to our fleet ensures NOAA can continue to provide the public, decision-makers and researchers with accurate, timely and life-saving information about extreme weather events," said Rear Adm. Chad Cary, director of the [NOAA Commissioned Officer Corps](#) and [NOAA Marine and Aviation Operations](#). "NOAA is using our more than 50 years of experience gathering data on hurricanes and other atmospheric phenomena to enhance the capabilities of these specialized new aircraft."

The new C-130Js are cargo-type aircraft, which will allow NOAA to accommodate larger science payloads. They will be equipped with a variety of updated instrumentation developed from experience with NOAA's current WP-3D Orion aircraft and from across the U.S. government.

Both new aircraft will be customized with the same Multi-Mode Radar as the P-3s, as well as new automated dropsonde launchers, high speed internet connectivity, vertically scanning doppler radar and instrument ports for a variety of research instruments for surface winds, waves and oceanographic sensing. The C-130Js will also be able to launch and control uncrewed aircraft systems that expand the reach of the aircraft into new and under-measured areas of the storm

environment.

These new aircraft will continue the legacy of the P-3s by supporting hurricane forecasting and research, tornado research, atmospheric rivers research and forecasting, satellite calibration and validation, fire weather and atmospheric chemistry and pollution tracking. The aircraft will also carry expanded mission capabilities that include long endurance coastal mapping, gravity measurements and transport capabilities to support worldwide deployments.

The C-130Js will be based at the NOAA Aircraft Operations Center in Lakeland, Florida, along with NOAA's other specialized environmental data-gathering [aircraft](#). The fleet is operated, managed and maintained by a combination of NOAA Corps officers and civilian personnel.
