

Northrop Grumman Completes Assembly of Manta Ray UUV

A full-size prototype of Manta Ray, a new class of uncrewed underwater vehicle, is assembled in Northrop Grumman's Annapolis facility. (Photo Credit: Northrop Grumman)

ANNAPOLIS, Md. – April 8, 2024 – (PHOTO RELEASE) Northrop Grumman Corporation (NYSE: NOC) completed assembly of a full-size uncrewed underwater vehicle (UUV) prototype known as Manta Ray. A new class of UUV, it is an extra-large glider that will operate long-duration, long-range and payload-capable undersea missions without need for on-site human logistics.

Manta Ray was built through a [Defense Advanced Research Projects Agency \(DARPA\) program](#) aimed at advancing key technologies to benefit future UUV designs, including techniques to manage energy, increased payload capacity, low-power propulsion and more.

Future Challenges May Involve Rethinking How the U.S. Fights, Speakers Say

Amiral James Kilby, the Vice Chief of Naval Operations, speaks at the luncheon panel on Monday.

The United States is facing a variety of challenges, from Houthi rebels in the Red Sea to the People's Republic of China, but the preferred American way of fighting – massive overmatch – may not be tenable for the future, two panelists said during the luncheon event at the opening day of Sea-Air-Space.

China is investing in its military faster than the U.S. is, and the new U.S. defense budget is a 1% increase in the top

line, which amounts to a decrease with inflation, said retired Admiral James "Sandy" Winnefeld, chair of the President's Intelligence Committee.

"Even if we could build the ships that we wanted to build, we would have trouble maintaining them all," he said. "And then manning is a challenge for us. So, it's entirely possible that the means that we want to apply to this problem ... are not going to be there."

What the nation may need to do is adopt a "whole of nation approach, not just a military-on-military approach, which involves diplomacy, economics, information, and of course the military," he said.

Vice Chief of Naval Operations Admiral James Kilby said one way forward is with disruptive technology, the sort being developed by the Disruptive Capabilities Office, the group set up last fall by Secretary of the Navy Carlos Del Toro to more quickly move technology to the field.

He wouldn't go into specifics of what the office is working on, but it's intended to look at a broad swatch of technology and see what can be tested and moved rapidly to the warfighter.

"The Disruptive Capabilities Office is meant to look across the whole DoD spectrum and understand what can be brought to bear quickly and to put that together in a test environment, test it, and have some confidence in it before we go after it," he said.

"... That is different behavior than how we're used to doing it, and it's basically capability focused," he said. It builds on the work of Task Force 59, which deployed maritime unmanned systems, and is aimed at ways to "produce some capability now versus the perfect in future," he said.

Retention is Good but Workforce Challenges Remain, Service Chiefs Say

Navy CNO Admiral Lisa Franchetti speaks at the opening session of Sea-Air-Space 2024

Retention in the Navy and Marine Corps is going well, but recruitment remains a challenge across the services, including the Maritime Administration, and the services must set priorities in a time of great challenges and tight budgets,

sea service chiefs said in the kickoff keynote panel of Sea-Air-Space 2024.

Undersecretary of the Navy Erik Raven, who introduced the panel, asked what is needed to continue U.S. dominance. "We need budgets to support our strategy, with people and readiness coming first," he said.

He noted the fiscal 2025 Navy budget request involves "some tough choices, putting quality of service and readiness at the top of the priority list means other program must either must make do or take risks."

But the proposed budget "boldly advances our undersea capabilities for both U.S. and AUKUS demands, solidifies our commitment to 31 amphibious ships, and advances the landing ship medium into production," he said.

The panelists then took up the issue of budgets and the challenges facing the services. Chief of Naval Operations Admiral Lisa Franchetti said the service has only a .7% increase in its budget in the fiscal 2025 request, forcing it to set priorities.

Number one is the Columbia-class submarine program, next is near-term readiness in "our forces and our people," and next is working with industry partners to make that happen.

"You can see the demand signal: 88 ships under contract, 66 under construction ... we know we need a larger Navy, every study since 2016 has shown that," she said. "I think the most effective way to work on that right now is invest in our industrial base, invest in the workforce, invest alongside our industry partners in the infrastructure necessary to really set the conditions to speed up the production and the throughput of the ships and submarines that we need to put more players on the field."

General Chris Mahoney, the assistant commandant of the Marine Corps.

General Chris Mahoney, the assistant commandant of the Marine Corps, said the fiscal '25 budget funds the LPDs, LHAs and LSMs the service needs, so “for what allows us to be ready, the 25 program right now is looking very strong.”

Admiral Linda Fagan, commandant of the Coast Guard, said “demand for the Coast Guard is deafening and it’s worldwide,” from dealing with the aftermath of the collapsed bridge in Baltimore to working with small nations that need the presence of cutters to help defend their interests.

She noted there is great Coast Guard demand for new ships as well.

“We, too, are in the largest acquisition that we’ve had since

World War II. We compete for the same industrial base space, both new construction and repair with the Navy. And it's critical for the nation that we've got that kind of reliable access and commitment to the new ship capacity and then repair capacity and maintenance capacity for the ships that are operating."

The Maritime Administration, too, is building new ships, albeit on a much smaller scale, said MARAD Administrator Ann Phillips. Its new builds, five new training ships, are for the Merchant Marine academies.

Admiral Linda Fagan, commandant of the U.S. Coast Guard.

"We thank Congress for the funding to be able to build these vessels, but when you have a 100% design, when you have firm

fixed-price contracts, when you have by law a very small change order budget, and you have commercial best practices being applied, you are able to move through this vessel construction and vessel procurement,” Phillips said. “We’re on budget. We’re nearly on time.”

Retention and Recruitment

Of course, having ships is one thing, but the services must be able to crew them and maintain them, which are challenges of their own.

“I’m happy to say that retention is very good in the Navy right now in almost all of our fields. And so, to me, that’s a signal that people are really committed to our mission,” Franchetti said.

The service is “very focused” on recruiting, she said. “We can have all the best platforms in the world, but if we don’t have the warfighters that can deploy them, we’re not going to be an effective Navy,” she said. “So, we’re focused hard on recruiting,” including by elevating the head of Navy recruiting to a two-star admiral.

The Navy is also “expanding the pool of folks that can join our Navy team,” including by boosting the age of enlistment to 42. “If anybody out there is not turned 42 yet, there should be some recruiters around who are going to sign you up,” she said. “And if your kid is above 18, you and your kid can be enlisted simultaneously.”

The Coast Guard has had a shortfall as well, Fagan said, but has “kind of recovered” and is looking to recruit more effectively as well, including by boosting its recruiting capacity by nearly 25% and going after young people where they are, including standing up junior ROTC programs and even going on Twitch.

“It’s an online collaborative gaming site, which,

surprisingly, there were a lot of 20-year-olds,” she joked. “There’s the target audience.”

Mahoney said retention numbers in the Marine Corps are “very, very good. We’ve made mission, we will make mission this year. You heard here first, our attention numbers are good and getting better, but it’s not a condition of stasis. You don’t declare victory and walk on to the next issue.”

The Marines must look at the factors that make and keep young men and women Marines, “and that equates to their conditions of the barracks, access to healthcare, access to childcare, good childcare, good gyms. And you’ve got to bring in new ideas to continually, not sit there and declare victory once again, but to make sure that you are addressing needs that they have,” Mahoney said.

**Lockheed Martin Advances
Aegis Weapon System
Coordination with Two Missile
Systems**

Lockheed Martin (Booth 1001) recently completed a successful Flight Test Aegis Weapon System-32 using the combat system to intercept a medium-range ballistic missile target using the Standard Missile-6 Dual II software upgrade.

The test, supported by the Missile Defense Agency, U.S. Navy, and Lockheed Martin, tested a real-world scenario and proved the versatility and strength of the Aegis Combat System, showing the latest weapon system configuration can defeat this class of threat working with the SM-6.

“We rapidly advance and integrate our technologies to ensure the U.S. Navy has the capabilities its Sailors need to meet their toughest missions today and tomorrow,” said Amr Hussein, vice president and general manager of multi-domain combat solutions at Lockheed Martin Rotary and Mission Systems. “This flight test utilized the latest updates to Aegis Baseline 9, which improves tracking, identification and intercept capabilities to solve for evolving, complex threats.”

Lockheed Martin is the Combat System Engineering Agent (CSEA),

responsible for the design, development, integration and test of the weapon system that successfully planned, searched, tracked, and conducted the engagement of the target, including launching and guiding the SM-6 intercept.

In response to written questions from Seapower, the company said the effort tested its latest designs as it continue to evolve and improve the system to defeat ever evolving and challenging threats.

The company has already integrated more than 60 into the Aegist Combat System, including a range of effectors and sensors, both domestically and for six international allies.

PAC Test

The company also investing in technology enhancements to integrate PAC-3 Missile Segment Enhancement (MSE) into the MK 41 Vertical Launching System to support employment with the Aegis Weapon System.

This integration would deliver a hardened defense to maritime fleets using an existing, well-tested interceptor to defends against threats including tactical ballistic missiles, cruise missiles and aircraft.

The company plans to participate in a live-fire event this year, although events are still largely under wraps. Last year, the company participated in an S-Band radio test which simulated the radio that Standard Missiles and others use to get midcourse guidance.

“That was a successful test, so all of the major lab-based, shore-based tests without doing a live fire have been successfully completed,” Tom Copeman, vice president of naval systems and strategy for Lockheed Missiles and Fire Control, told Seapower in an interview. “... All prepping for a live-fire event which is scheduled for 2024.”

The Aegis Combat System has a long and successful record, and the PAC-3 has a lengthy pedigree as well, “so we’re confident that the marriage of these two very, very mature systems will yield a much-improved capability for the United States Navy if they choose to move forward with it,” Copeman said.

The number of Aegis Weapon Systems and PAC-3 missiles could lead to a somewhat widespread use in the fleet should the Navy choose to go that route, and Copeman said “we’ll continue to internally invest to keep the project moving, so if they do decide to go, it could be fairly rapidly implemented if the Navy says they want to do it.”

“Think about the capacity that will enable, which is really a huge capability that we can give the U.S. Navy,” Hussein said.

Navies Face Future Fight in Undersea Defense

Innovation is key to advancing the U.S. Navy’s long-term dominance of the undersea domain. “We need to think about how do we do battlefield innovation ... We are focusing on expanding the reach, the depth, and the lethality of our conventionally manned fleet through disruptive and emerging technologies, that includes unmanned systems,” Chief of Naval Operations Admiral Lisa Franchetti said at a recent defense forum.

Through technological innovation including advanced undersea sensing and detection, the U.S. Navy has enjoyed unchallenged dominance of the undersea domain from the Cold War to the present day. This dominance has ensured that maritime highways are open to the vital transportation of goods among nations.

Maintaining freedom of navigation in the face of potential adversaries who are fielding increasingly capable undersea threats is also a defining technical challenge for the Navy and its allies.

Advanced Acoustic Concepts, LLC (AAC) a wholly owned subsidiary of Thales Defense & Security, Inc. (TDSI) headquartered in Hauppauge, New York, is providing the Navy with proven combat systems that address the current undersea warfare challenges of anti-submarine warfare and mine countermeasures (MCM) solutions.

AAC capability is enabling the Navy's surface force to be more effective at hunting enemy submarines with the Combined Active/Passive Towed Array Sonar (CAPTAS)-4. The Navy selected the CAPTAS-4 Variable Depth Sonar system for installation onboard the new Constellation Class Frigates in May 2022. The CAPTAS-4 transmitter provides an unmatched sound source for detecting submarines and larger UUVs at significant distances. In October 2023, TDSI's AAC delivered the first CAPTAS-4 to the FFG-62 program ahead of schedule. The complete manufacturing and assembly of all follow-on CAPTAS-4 systems will take place at a state-of-the-art production facility in Lemont Furnace, Pennsylvania.

CARTAS-4 manufacturing production is underway.

While identifying undersea threats is crucial in naval operations, it is only one piece in a larger group of needs. Combined data, computing power and artificial intelligence for command and control of an entire operation are all vital for success.

For this reason, AAC offers system integration and sensor signal processing through command-and-control suites such as the Littoral Combat Ship (LCS) Mission Module common compute environment for mine detection and targeting. This portable control station solution offers a real-time data-fused common operational picture of undersea objects of interest, transmitted from data captured by the Thales Synthetic Aperture Mine Detection Imaging Sonar (SAMDIS).

The SAMDIS underwater solution, being introduced to market by AAC, uses three acoustic beams to accurately identify an object instead of one. Harnessing three acoustic beams allows users to detect undersea objects accurately while determining

which are mines faster than current synthetic aperture sonar systems. The mission module combat system processes the ultra-high resolution SAMDIS imagery and uses AI-enhanced Automatic Target Recognition (ATR) software applications to quickly analyze the object and provide leaders with a detailed situational awareness picture for more informed decision-making. To complete this real-time detect-to-engage mission, AAC also offers a mine neutralization capability in the form of a small unmanned underwater vehicle (UUV).

Additionally and to date, TDSI has delivered over 300 Airborne Low Frequency Sonars (AN/AQS-22) to the U.S. Navy for employment onboard the MH-60R helicopters. These dipping sonars provide the MH-60R platform with long-range detection and a wide coverage rate to clear an area of interest or as a complementary anti-submarine warfare asset to sonars onboard surface vessels for target localization and engagement.

ALFS Airborne dipping sonar onboard MH-60R helicopter © Lockheed Martin.

The comprehensive innovative approach Thales has taken in the undersea domain will enable the Navy to detect, understand and eliminate underwater threats in tactically relevant timeframes. By providing a family of sensing and situational awareness capabilities, Thales is enabling the Navy and international security partners together to stay ahead of the worldwide near-term threat.

First East-Coast-Assigned Navy CMV-22B OSPREY Arrives in Norfolk

[By Commander, Naval Air Force Public Affairs](#), April 5, 2024

NORFOLK, Va. – The first East Coast-assigned Navy tiltrotor vertical/short takeoff and landing (V/STOL) CMV-22B Osprey aircraft, assigned to Fleet Logistics Multi-Mission Squadron (VRM) 40, arrived to Naval Station Norfolk on April 5.

“Naval Aviation is ecstatic to welcome the first CMV-22B Osprey to Norfolk,” said Rear Adm. Doug Verissimo, commander, Naval Air Force Atlantic (CNAL). “This first aircraft’s arrival symbolizes an evolution and change in Naval Aviation as we look toward the future. The event represents the hard work and stamina of our aviators, aircrewmen, maintainers and sustainment personnel in the VRM community.”

The CMV-22B will provide the fleet’s medium-lift and long-range aerial logistics capability, eventually replacing the C-2A Greyhounds of Fleet Logistics Support Squadron (VRC) 40 over the next several years. The squadron’s relocation to Naval Station Norfolk is part of their permanent duty station change from Naval Air Station (NAS) North Island in

preparation to provide fleet logistic aviation assets to the Atlantic Fleet beginning in 2025.

The VRM-40 "Mighty Bison" were established aside their existing sister squadron, VRM-30, and the training squadron, VRM-50, aboard NAS North Island in March 2022.

All squadron personnel have been officially stationed in Norfolk since Feb. 1, 2024. The remaining VRM-40 aircraft will begin to arrive to Hampton Roads in the summer of 2024.

VRM-40's leadership consists of Cmdr. Matthew Boyce, commanding officer; Cmdr. Mason Fox, executive officer, and Command Master Chief Bradley Wissinger.

"We are proud to join the Commander, Naval Air Force Atlantic team and eager to lean forward into our next phase of stand-up," Boyce said.

Fox discussed the importance of standing up a new squadron on the East Coast.

"We're excited to be in our permanent home at Naval Station Norfolk and focused on continuing to build the squadron to execute our mission – delivering high priority people and parts to carrier strike groups at sea," Fox said. "The Osprey is an extremely capable aircraft and will be critically important to the way the Navy fights for many years to come."

In addition to VRM-40, a type wing detachment was established onboard Naval Station Norfolk earlier in 2023 to provide local representation of Commander, Fleet Logistics Multi-Mission Wing (CVRMW), based at NAS North Island.

CVRMW's mission is to provide Pacific and Atlantic Fleet VRM squadrons the ability to sustain lethality for carrier strike groups of the future through the timely, persistent air logistics missions our nation demands any place in the world. The CMV-22B is the Navy's long-range/medium-lift element of

the intra-theater aerial logistics capability responsible for transporting personnel, mail and priority cargo from shore logistics sites to ships at sea.

Naval Air Force Atlantic is responsible for seven nuclear-powered aircraft carriers, 55 aircraft squadrons, 1,200 aircraft and 52,000 officers, enlisted and civilian personnel with priorities focused on warfighting, people, and readiness by providing combat ready, sustainable naval air forces with the right personnel, properly trained and equipped, with a focus on readiness, operational excellence, interoperability, safety, and efficient resourcing.

USS Leyte Gulf Takes Down Semi-Submersible Vessel

ATLANTIC OCEAN (March 22, 2024) – The Ticonderoga-class guided missile cruiser USS Leyte Gulf (CG 55), embarked U.S. Coast Guard Law Enforcement Detachment (LEDET) and Helicopter Maritime Strike Squadron (HSM) 50 work together to intercept a self-propelled semi-submersible drug smuggling vessel (SPSS), in the Atlantic Ocean, March 22, 2024 (U.S. Coast Guard Courtesy Photo)

By USNAVSOUTH/4TH FLEET PUBLIC AFFAIRS, April 8, 2024

ATLANTIC OCEAN – The Ticonderoga-class guided missile cruiser USS Leyte Gulf (CG 55), with an embarked U.S. Coast Guard (USCG) Law Enforcement Detachment (LEDET), has made multiple drug interdictions in the U.S. Southern Command (USSOUTHCOM) area of operations (AOR).

In March, while on patrol in the Atlantic Ocean, the crew detected a self-propelled semi-submersible drug smuggling vessel (SPSS). With assistance from Helicopter Maritime Strike Squadron (HSM) 50, the crew acquired the location of the SPSS

and LEDET members launched a rigid-hull inflatable boat (RHIB) to intercept the vessel. The LEDET detained the individuals aboard the SPSS and seized approximately 2,370 kilograms of cocaine. Then the crew conducted a sinking exercise (SINKEX) on the SPSS.

“Spotting this vessel was like finding a needle in the haystack,” said Lt. Commander Travis Lee, Leyte Gulf’s senior aviator. “I’ve been doing this for seven years and not once been able to find and acquire such an asset until now.”

Taking down the SPSS was only the latest success for USS Leyte Gulf on this deployment.

In February, while on patrol in the Caribbean Sea, the ship intercepted three different vessels using coordinated air and surface operations involving both U.S. and partner nation forces.

During the interdictions, the LEDET boarded and took positive control of each vessel. On Feb. 6, the ship recovered 520 kilograms of cocaine worth an estimated \$12.8 million. On Feb. 15, they recovered 600 kilograms of cocaine worth an estimated \$15.25 million. Then on Feb. 28, the crew recovered another 600 kilograms of cocaine worth an estimated \$15 million.

“Our Leyte Gulf team was ready when called upon to execute all three interdictions,” said Commanding Officer Capt. Nathan Diaz. “The successful seizure of more than \$42 million in illicit drugs is a testament to the interoperability of our partner nations, the Coast Guard and the Leyte Gulf team.”

“It was an exciting day to be the Officer of the Deck running the bridge for one of our interdiction operations,” said Lt. j.g. Jayden Hodgson, an officer of the deck and public affairs officer aboard the ship. “Leyte Gulf prevented the illicit importation of drugs that day and we are only getting

started.”

USS Leyte Gulf is currently deployed in the USSOUTHCOM AOR to support bilateral and multinational maritime operations with partners in the region, conduct Theater Security Cooperation (TSC) port visits, and to support JIATF-South in countering illicit-drug trafficking.

LEDETs are deployable specialized forces of the U.S. Coast Guard that enforce U.S. laws and treaties in the maritime domain.

U.S. Naval Forces Southern Command/U.S. 4th Fleet supports U.S. Southern Command’s joint and combined military operations by employing maritime forces in cooperative maritime security operations to maintain access, enhance interoperability, and build enduring partnerships in order to enhance regional security and promote peace, stability and prosperity in the Caribbean, Central and South American region.

April 6 Red Sea Update

U.S. Central Command, April 7, 2024

TAMPA, Fla. – Between approximately [10:00](#) a.m. and [3:00](#) p.m. (Sanaa time) on April 6, U.S. Central Command (CENTCOM) forces successfully destroyed one mobile surface-to air missile system in Houthi controlled territory of Yemen. CENTCOM forces also shot down one unmanned aerial vehicle (UAV) over the Red

Sea.

Additionally, at approximately [6:00](#) p.m. (Sanaa time), a Coalition vessel detected and successfully engaged and destroyed one inbound anti-ship missile.

There were no injuries or damage reported by U.S., coalition, or commercial ships. It was determined that these systems presented a threat to U.S. and coalition forces and merchant vessels in the region. CENTCOM is dedicated to protecting the freedom of navigation and making international waters safer and more secure for Coalition and merchant vessels.

CMF's Combined Task Force 150 Seizes Nearly 400 Kilograms in Illegal Narcotics in the Arabian Sea

Bags of illegal narcotics seized from a vessel are stacked on the deck of the U.S. Coast Guard Sentinel-class fast response cutter USCGC Glen Harris (WPC 1144) in the Arabian Sea, April 4. (Photo by U.S. Coast Guard)

By U.S. Naval Forces Central Command Public Affairs | April 08, 2024

MANAMA, Bahrain – A U.S. Coast Guard cutter, working in direct support of Combined Task Force (CTF) 150 of Combined Maritime Forces, seized nearly 400 kilograms of illegal drugs from a dhow in the Arabian Sea, April 4.

Crewmembers from the Sentinel-class fast response cutter USCGC Glen Harris (WPC 1144) discovered and seized 15 kilograms of heroin and 375 kilograms of methamphetamine aboard the dhow. After weighing and documenting the haul, the crew properly disposed of the narcotics.

“This is the second major interdiction of the USCGC Glen Harris and the CTF-150 team with a combined total of 1,160 kg of drugs seized to date, denying income to criminal and

terrorist organizations from the profits of illicit narcotics,” said Capt. (N) Colin Matthews, commander of CTF-150. “This exceptional multinational cooperation between our two teams is an example of the impacts we can make when we work together.”

On March 5, Glen Harris, working in support of CTF 150, seized 770 kilograms of methamphetamines from a dhow in the Arabian Sea.

Glen Harris is forward deployed to Bahrain. The fast response cutter is part of a contingent of U.S. Coast Guard ships forward-deployed to the region under Patrol Forces Southwest Asia (PATFORSWA). PATFORSWA deploys Coast Guard personnel and ships alongside U.S. and regional naval forces throughout the Middle East.

CTF 150 is one of five task forces under Combined Maritime Forces, the world’s largest international naval partnership. CTF 150’s mission is to deter and disrupt the ability of non-state actors to move weapons, drugs and other illicit substances in the Indian Ocean, the Arabian Sea and the Gulf of Oman.

Combined Maritime Forces is a 42-nation naval partnership upholding the international rules-based order by promoting security and stability across 3.2 million square miles of water encompassing some of the world’s most important shipping lanes.

COMPACFLT Holds Change of

Command Ceremony in Pearl Harbor

Adm. Stephen Koehler addresses the audience after becoming the commander, U.S. Pacific Fleet during the COMPACFLT change of command ceremony onboard Joint Base Pearl Harbor-Hickam, April 4. (U.S. Navy photo by Mass Communication Specialist 2nd Class Jeremy R. Boan)

From Commander, U.S. Pacific Fleet Public Affairs, Apr 4. 2024

Adm. Stephen Koehler assumed command of the U.S. Pacific Fleet (PACFLT) during a change of command ceremony on Joint Base Pearl Harbor-Hickam, April 4. He relieved Adm. Samuel Paparo, who took over as commander of PACFLT in May 2021.

Adm. John Aquilino, commander, U.S. Indo-Pacific Command, opened the ceremony by thanking Adm. Lisa Franchetti, chief of naval operations, for sending her best leaders to U.S. Pacific Fleet.

“You are looking at the world’s greatest warfighters sitting behind me,” said Aquilino. “In the world’s most concerning theater, against our world’s most dangerous adversaries, what has been chosen to run this theater are our best warfighters. That is not by accident.”

Adm. Lisa Franchetti, chief of naval operations, presided over the ceremony. She welcomed Koehler and praised Paparo for his leadership during his time as the PACFLT commander.

“Sam, you understood that the most powerful tool we have – our true strategic advantage – comes from our strong relationships with our allies and partners,” said Franchetti. “And that our shared values and common interest bind us together, and put more ready players on the field – every single day. Sam, I cannot be more proud of the work that you’ve done as the Pacific Fleet commander, and I’m excited about what is yet to come as you head up the hill (to Camp Smith), and become the 27th commander of U.S. Indo-Pacific Command next month.”

Franchetti welcomed Koehler saying: “You know how to build strong teams to get after our vital mission here in the Indo-Pacific at this critical time in our nation’s history. There is no one more ready to lead this Fleet. I am absolutely confident that you are the right person at the right time to lead our Sailors in the Indo-Pacific. And I look forward to seeing all that this Fleet will accomplish on your watch.”

While under Paparo’s command, PACFLT qualified as a joint task force, established Task Force 504, a task force focused on combat sustainment; Fleet Information Warfare Command Pacific; expanded opportunities for deployed ship repair in India; and completed numerous joint and combined multi-lateral operations across the region with allies and partners.

“These accomplishments and many more have demonstrated our capability and our will to our would-be adversaries. These accomplishments have deterred conflict and preserved the peace,” said Paparo.

He took a moment to address the Sailors, chief petty officers, civilians and officers across the Fleet, both at sea and ashore.

“The best part of my job has been watching this team in action,” Paparo said. “I appreciate all that you have done over the last three years. And as I utter these words, your efforts continue. Every day you continue building a more effective fighting force. I am honored to remain your teammate as I take up my next duty, and I am proud to turn over command to Adm. Stephen “Web” Koehler.”

Koehler comes to the historic Pearl Harbor headquarters from Washington, D.C., where he served as director for Strategy, Plans and Policy, J5, Joint Staff.

“I could not be more excited and honored to assume command of the finest fleet in the world, whose capabilities are second to none,” said Koehler. “The U.S. Pacific Fleet answers our nation’s call to compete with unity of purpose, without hesitation, and with a powerful and resolute force.”

Koehler is the 38th commander since the Fleet’s Pearl Harbor headquarters was established in February 1941. He commissioned through the Naval Reserve Officers Training Corps (NROTC) at University of Colorado at Boulder in 1986, and was designated a naval aviator in March 1989. He has flown over 3,900 hours in the F-14 Tomcat and F-18 E/F/G Super Hornet with 600 carrier landings.

“Success during competition will require a bias for action, constant drive for excellence, continued vigilance, and the

ability to rapidly transition to seizing the initiative and holding it," said Koehler. "Success will require teamwork with precise execution and mastery of the basics, and then stretching ourselves operationally and tactically as a team of teams. Success will require cooperation across the supporting elements of the Navy, collaboration across numbered fleets, joint integration, and teamwork with allies and partners."

U.S. Pacific Fleet is the world's largest fleet command with an area of operations that encompasses 100 million square miles, nearly half the Earth's surface, from Antarctica to the Arctic Circle and from the West Coast of the United States into the Indian Ocean. The U.S. Pacific Fleet consists of approximately 200 ships and submarines, nearly 1,200 aircraft, and more than 130,000 Sailors and civilians.
