U.S. Navy Awards Leonardo DRS $417 Million Contract for Submarine Combat System Hardware

ARLINGTON, Va. July 31, 2024 – Leonardo DRS, Inc. (NASDAQ: DRS) announced today that it was awarded a contract by the U.S. Navy to provide critical electronic combat control and sonar systems equipment for installation across the service's fleet of submarines and allied fleets. The contract ceiling is more than $417 million.

The Technology Insertion Hardware TI-26 indefinite delivery/indefinite quantity contract will provide design, procurement, production, sparing, test, installation, and support of displays, workstations, processors, and network systems; the production of subsequent systems, kits and enclosures; and engineering and technical services. The contract was awarded by the U.S. Navy's Naval Undersea Warfare Center, Keyport.

TI-26 is the latest generation of a continuously evolving family of display, processor, and network systems in support of the US Navy's Submarine Warfare Federated Tactical System family of systems required on U.S. Navy submarines. This contract combines purchases for the U.S. Navy, the Foreign Military Sales program, and the Royal Australian Navy.

"We are very proud to again be selected as the design agent on TI-26 and are honored to support this critical submarine combat control and sonar system hardware program for the U.S. Navy and allied partners," said Cari Ossenfort, senior vice president and general manager of the Leonardo DRS Naval Electronics business unit. "DRS is uniquely qualified for this program because of our agility, proven engineering processes, and experienced team, and that is also the reason we remain a trusted partner to Naval Sea Systems Command and Program Executive Office Submarine."

This work is an example of DRS's deep experience as a leader in complex design and manufacturing supporting a wide range of missions and capabilities. The company's abilities extend across all domains to support naval, ground, air, space, and cyber missions in areas of sensing, force protection, computer networking, as well as naval power and propulsion systems.

Navy Reserve Reaches Unprecedented C-130 Readiness

by MCC Chelsea Milburn of Commander, Naval Air Force Reserve Public Affairs

29 July 2024

SAN DIEGO – In the less than two years since working toward expanding its capabilities to provide mission-critical logistics support around the globe, the Navy Reserve's Fleet Logistics Support Wing (FLSW) has delivered record C-130T readiness.

The wing increased mission capable aircraft from an average of six aircraft in January 2022 to a peak output of 16 aircraft in June 2024, an unmatched Type/Model/Series improvement across the Naval Aviation Enterprise.

In recent years, the Navy has called for Navy leadership across the fleet to "Get Real, Get Better" (GRGB). This call to action encourages Navy leaders to improve readiness with a foundation of honest self assessment, embracing problem areas as opportunities and constantly seeking ways to innovate and improve.

Shortly after beginning his tour as Commander, Naval Air Force Reserve (CNAFR) in 2022, Rear Adm. Brad Dunham recognized a gap between the fleet's needs for Navy Unique Fleet Essential Airlift (NUFEA) support and what the Navy Reserve's Fleet Logistics Support Wing (FLSW) was able to provide. He called upon FLSW leadership to evaluate how they could maximize C-130 readiness to close the gap.

In the less than two years since working toward expanding FLSW's readiness to provide mission-critical logistics support around the globe, FLSW has delivered record C-130T readiness. The wing increased mission capable aircraft from an average of six aircraft in January 2022 to a peak output of 16 aircraft in June 2024, an unmatched Type/Model/Series improvement across the Naval Aviation Enterprise.

"We recognized in January of 2022 that the average of six mission-capable C-130Ts was missing the mark, and our phenomenal team of professionals dug in to make a tangible change," said FLSW Commodore Capt. J.T. Ward. "We joined

the Commander, Naval Air Forces Atlantic Maintenance Operation Center (MOC) to streamline maintenance processes. We adopted best practices from civilian counterparts and the United States Air Force to improve sustainment. We established processes to remove administrative barriers up and down the chain of command. Combined, these changes resulted in the highest performance outcomes in the history of the Navy C-130T legacy program, evidenced by today's mission capable rates."

Dunham expressed his pride in FLSW's hard work that not only resolved the issue but achieved record-breaking success.

"FLSW leadership approached C-130 readiness with a laser focus on performance improvement to bring 'Get Real, Get Better' tenets to the forefront," said Rear Adm. Brad Dunham. "The unprecedented success of these efforts and their impact to the fleet illustrate the Naval Air Force Reserve's commitment to current readiness and developing future warfighting advantages."

The increased availability of mission-capable C-130T aircraft has greatly enabled increased global NUFEA mission execution. Since January 2022, the wing has provided more than 50,000 mishap-free flight hours and delivered more than 200,000 passengers and 40 million pounds of cargo in support of Navy units operating around the globe.

FLSW is a Navy Reserve air wing with 11 squadrons flying the K/C-130T Hercules and C-40A Clipper. FLSW and the Navy Reserve's Naval Aviation Logistics Office work together as the Navy's sole organic intra-theater airlift capability operating worldwide.

LSU and Integer Technologies Announce $9.8M ONR Contract, Partnership

Navy funding advances intelligent autonomy for maritime vessels, supporting LSU research priorities in Coast, Defense and Energy

COLUMBIA, S.C. – July 30, 2024 – LSU and Integer Technologies announce the Office of Naval Research has awarded their team a $9.8 million contract to research and develop new solutions for improving the intelligence, autonomy and decision-making ability of distributed networks of maritime intelligent autonomous systems for naval operators.

The program, titled Intelligent Data Management for Distributed Naval Platforms, will support the U.S. Navy's goal of transitioning to uncrewed and autonomous vessels to achieve Distributed Maritime Operations. The LSU-Integer team will research and develop digital engineering and artificial intelligence and machine learning approaches to enable naval autonomous vessels with three essential functions: 1) make sense of limited data to determine its importance to the mission, 2) communicate securely, effectively and efficiently with other assets, and 3) independently determine best actions through global models, particularly in scenarios with high uncertainty.

In support of the program, Integer Technologies has established a permanent research and development office in the Louisiana Digital Media Center on LSU's flagship campus in Baton Rouge. The Integer office will be home to scientists, engineers and staff to establish a dedicated Department of Defense capability in Louisiana, supported by a pipeline of qualified LSU graduates.

“With our proud military legacy and flagship mission, LSU continues to serve and protect Louisiana and the nation,” LSU President William F. Tate IV said. “We have world-class problem solvers in coastal science and engineering, in cybersecurity and energy, and are excited to partner with Integer Technologies to put our research faculty and outstanding students and graduates in a position to support the U.S. Navy in defense of our great nation, in a way that creates jobs right here in Louisiana.”

“Our work with Integer is an example of a true partnership,” said Greg Trahan, director of economic development at LSU, and university lead on the project. “Our research capabilities and outstanding students are the reasons Integer is opening their Baton Rouge office and, collectively, we’re building a competitive advantage in technology and talent development for the Navy, here in Louisiana.”

“We’re excited about this partnership as the breadth and depth of the research capacity and the entrepreneurial spirit we’ve found at LSU is outstanding,” said Duke Hartman, CEO of Integer Technologies. “This partnership has absolutely huge potential for the state, and has already led to additional high-impact, multi-million-dollar proposals between Integer and LSU. I couldn’t be more pleased to announce this partnership, hire LSU grads and establish a permanent office in Baton Rouge.”

The program positions LSU and Integer to build broader capabilities to meet Navy needs, including to secure maritime and cyber-physical critical infrastructure along the Gulf Coast. The research team will develop and test prototypes in waters off Louisiana’s ports and coast in real-world conditions, with an eye toward dual-use technologies with applications in domestic port security, offshore energy, and ocean and coastal remote sensing.

“My administration is committed to the continued economic

growth of our great state of Louisiana," Governor Jeff Landry said. "Supporting our military, increasing port security and supporting the offshore energy industry through projects like this will bring continued investment and high-earning jobs to the hardworking men and women of Louisiana."

"Keeping our country safe in the future is all about how well we can gather and make sense of data and intelligence," said Senator Bill Cassidy. "This partnership between LSU and Integer Technologies helps our Navy defend our nation better. Louisiana can be proud that LSU is who the Navy is working with."

July 30 U.S. Central Command Update

From U.S. Central Command

July 30, 2024

TAMPA, Fla.- In the past 24 hours, U.S. Central Command (USCENTCOM) forces successfully destroyed three Iranian-backed Houthi uncrewed surface vessels (USV) in the Red Sea.

It was determined these weapons presented an imminent threat to U.S., coalition forces, and merchant vessels in the region. These actions were taken to protect freedom of navigation and make international waters safer and more secure.

U.S. Navy Accepts Delivery of Future USS Nantucket (LCS 27)

By Program Executive Office Unmanned and Small Combatants (PEO USC) Public Affairs

July 30, 2024

MARINETTE – Freedom-variant Littoral Combat Ship (LCS), USS Nantucket (LCS 27), was delivered to the U.S. Navy, July 29.

Nantucket was accepted from Lockheed Martin at the Fincantieri Marinette Marine shipyard in Marinette, Wisconsin. Delivery follows the successful completion of Acceptance Trials in December 2023. Nantucket will commission later this year, and will be homeported in Mayport, Florida.

The LCS-class comprises fast, optimally manned, mission-tailored surface combatants that can operate in both near-shore and open-ocean waters to counter 21st-century coastal

threats.

“The future USS Nantucket serves as a shining example of the perseverance of the United States maritime industrial base and shows that the partnership we have with industry is built to last,” said Capt. Matthew Lehmann, program manager of the Littoral Combat Ship program office.

Nantucket is a testament to the enduring connection between the ship’s namesake city in Massachusetts and the Navy, honoring the rich heritage of the people of Nantucket and the maritime legacy that the island represents. Nantucket is the fourth Navy ship to be named in honor of the island.

“Together, the Navy and industry will continue our work to prepare her for commissioning and Fleet operations, delivering combat capability across the globe,” Lehmann added.

Following Nantucket, two more Freedom-variant ships are under construction at the Fincantieri Marinette Marine shipyard. The future USS Beloit (LCS 29) is scheduled for delivery in the summer of 2024. USS Cleveland (LCS 31), the final Freedom-variant LCS, is in its final stages of construction alongside Beloit.

The LCS-class supports forward presence, maritime security, sea control, and deterrence, and can operate independently or in high-threat environments as part of a networked battle force that includes larger, multi-mission surface combatants.

The LCS-class consists of two variants, Freedom and Independence, designed and built by two separate industry teams. The trimaran-hulled Independence-variant team is led by Austal USA (for the even-numbered ships). The monohull Freedom variant is built by a team led by Lockheed Martin (for the odd-numbered ships).

The Navy’s littoral combat ship program is a part of the Program Executive Office, Unmanned and Small Combatants

portfolio, which designs, develops, builds, and delivers the Navy’s unmanned maritime systems; mine warfare systems; special warfare systems; expeditionary warfare systems; and small surface combatants.

USNS City of Bismarck Arrives at the Port of Legazpi for Pacific Partnership 2024-2

LEGAZPI, Philippines – The expeditionary fast transport ship USNS City of Bismarck (T-EPF 9) arrived at the Port of Legazpi in preparation for the start of Pacific Partnership 2024-2 humanitarian mission in the Philippines, July 30, 2024.

“It’s wonderful to return to the Philippines, where we look

forward to training alongside the citizens of Legazpi's medical and disaster relief personnel," said Capt. Daniel J. Keeler, Pacific Partnership 24-2 mission commander. "Our nations share a rich history of collaboration, and we look forward to strengthening our enhanced cooperation and interoperability in the days and years ahead."

Pacific Partnership visited Puerto Princesa City, Palawan, in 2022, San Fernando City, La Union in 2023 and will be in Legazpi, Albay from July 30 – Aug. 14, 2024.

"Combining the expertise of professional mariners with the skill of our Pacific Partnership forces makes our multilateral forces ready and versatile to respond to any event in the Indo-Pacific Region," said Chris Jackson, ship's master, "The USNS City of Bismarck is an incredibly diverse platform, with a 20,000 square feet mission bay that can be loaded to carry any cargo, making it ideal to bring Pacific Partnership back to the Philippines for the third consecutive year."

The shallow-draft catamaran, designed for rapid and agile maneuverability for use at austere or degraded offload points, includes a flight deck to support day and night aircraft launch and

recovery operations, with airline-style seating for 312 embarked forces and fixed berthing for 104 people.

Pacific Partnership fosters multilateral cooperation and emphasizes a multinational whole-of-government approach, by planning and executing operations with U.S. and partner nation militaries, interagencies, international organizations, and non-governmental organizations. This subsequently provides a strong foundation of trust and enhances our collective ability to respond in times of crisis.

The PP24-2 mission also includes stops in Vanuatu, Vietnam and the Federated States of Micronesia. Events are synchronized with the host nation and are organized according to their

requests and needs.

Born out of the devastation brought by the December 2004 tsunami that swept through parts of South and Southeast Asia, Pacific Partnership began as a military-led humanitarian response to one of the world’s most catastrophic natural disasters. Building on the success and goodwill of this operation the U.S. helped spearhead the inaugural Pacific Partnership mission in 2006. This mission leveraged partner nation militaries and Non-Governmental Organizations proficiencies to expand disaster relief capacity in Bangladesh, Indonesia, the Philippines and Timor-Leste.

Pacific Partnership, now in its 20th iteration, is the largest annual multinational humanitarian assistance and disaster relief preparedness mission conducted in the Indo-Pacific. Each year the mission team works collectively with host and partner nations to enhance regional interoperability capabilities, increase maritime security and stability in the region, and foster new and enduring friendships in the Indo-Pacific.

First Royal Australian Navy Sailors Graduate From Basic Enlisted Submarine School

30 July 2024

From Lauren Laughlin

GROTON, Conn. – In a first for the AUKUS trilateral enhanced security partnership, a group of Royal Australian Navy (RAN) enlisted sailors has graduated from the United States Navy's Basic Enlisted Submarine School (BESS). The sailors all graduated with distinction with one of them being named the Honor Graduate for scoring a 100% in the class. The graduation marks a significant milestone in the development of a conventionally armed, nuclear-powered attack submarine (SSN) fleet for Australia under the AUKUS Pillar 1 Optimal Pathway.

"It's another exciting step to see our Royal Australian Navy sailors graduate from this unique and challenging training. I am incredibly proud of their exceptional dedication and effort to reach this significant milestone," said Chief of the Royal Australian Navy Vice Adm. Mark Hammond. "I'd like to thank our long-standing partners and friends in the U.S. Navy for providing the training to assist the Royal Australian Navy to operate, maintain and support Australia's future nuclear-powered submarine capability."

Incorporating Royal Australian Navy enlisted personnel into the U.S. Navy's submarine training pipeline is essential to developing Australian crews ahead of Australia's acquisition of sovereign Virginia-class submarines that will be sold to Australia by 2030. Enlisted personnel make up the bulk of a Virginia-class submarine crew, which is typically comprised of 15 officers and 117 enlisted sailors. Royal Australian Navy sailors are also enrolled in the UK Royal Navy's nuclear training pipeline, with the first officers graduating from the UK Royal Navy's Officers Nuclear Operators Course earlier this month. All work by Australian personnel in the U.S. and UK will remain consistent with Australia's domestic and international legal obligations, including its non-proliferation obligations and commitments.

"For the last two months, these sailors have trained diligently alongside their American counterparts to acquire the capability to safely operate SSNs," said Naval Submarine School Commanding Officer Capt. Matthew Fanning. "They will continue to hone their skills in rate-specific training prior to reporting to a Virginia-class submarine as part of the crew to put their training into execution alongside U.S. submariners."

The BESS graduation comes just months after the first three Royal Australian Navy officers completed their training at the U.S. Navy's Submarine Officer Basic Course in April 2024 and reported to Virginia-class submarines based in Pearl Harbor, Hawaii. Nearly 100 Royal Australian Navy officers and enlisted personnel will enter the submarine and U.S. Naval Nuclear Propulsion training pipelines this year.

"Our sailors are the backbone of our Navy. Their training success demonstrates the exceptional skillset and knowledge of our people," said Warrant Officer of the Royal Australian Navy Andrew Bertoncin, the service's senior non-commissioned

representative. “I’m proud of what our sailors have achieved and look forward to seeing them continue to master their craft onboard a Virginia-class submarine.”

At BESS, the Royal Australian Navy sailors joined their American counterparts for a rigorous eight-week course where they developed the skills and competence needed to operate nuclear-powered attack submarines. Sailors studied the construction and operation of nuclear-powered submarines and gained hands-on experience through intensive simulations.

“We are extremely proud of what these sailors have accomplished as the first Royal Australian Navy enlisted sailors to graduate from one of the U.S. Navy’s most demanding training courses,” said Vice Adm. Jonathan Mead, Director General of the Australian Submarine Agency. “Their success in this training is another positive step forward as we work with our U.S. and UK partners to progress along the AUKUS Pillar 1 Optimal Pathway and toward our shared goal of a stable and prosperous Indo-Pacific.”

“These sailors are the foundation of Australia’s future SSN crews,” said the U.S. Navy’s AUKUS Integration and Acquisition Program Manager Rear Adm. Lincoln Reifsteck. “They are trailblazers leading the broader effort to strengthen the interoperability and capabilities of the AUKUS nations. Their graduation is a major step toward realizing the strategic goals of AUKUS as well as deepening the ties among our nations.”

AUKUS is a strategic partnership that will promote a safe, free, and open Indo-Pacific, enhance national security, and uplift the three industrial bases. AUKUS Pillar 1 will deliver a conventionally armed SSN capability to the Royal Australian Navy by the early 2030s. The Department of the Navy’s AUKUS Integration and Acquisition Program Office is the U.S. lead responsible for executing the trilateral partnership to

deliver conventionally armed, nuclear-powered attack submarines to the Royal Australian Navy at the earliest possible date while setting the highest nuclear stewardship standards and continuing to maintain the highest standards of non-proliferation.

July 29 U.S. Central Command Update

From U.S. Central Command

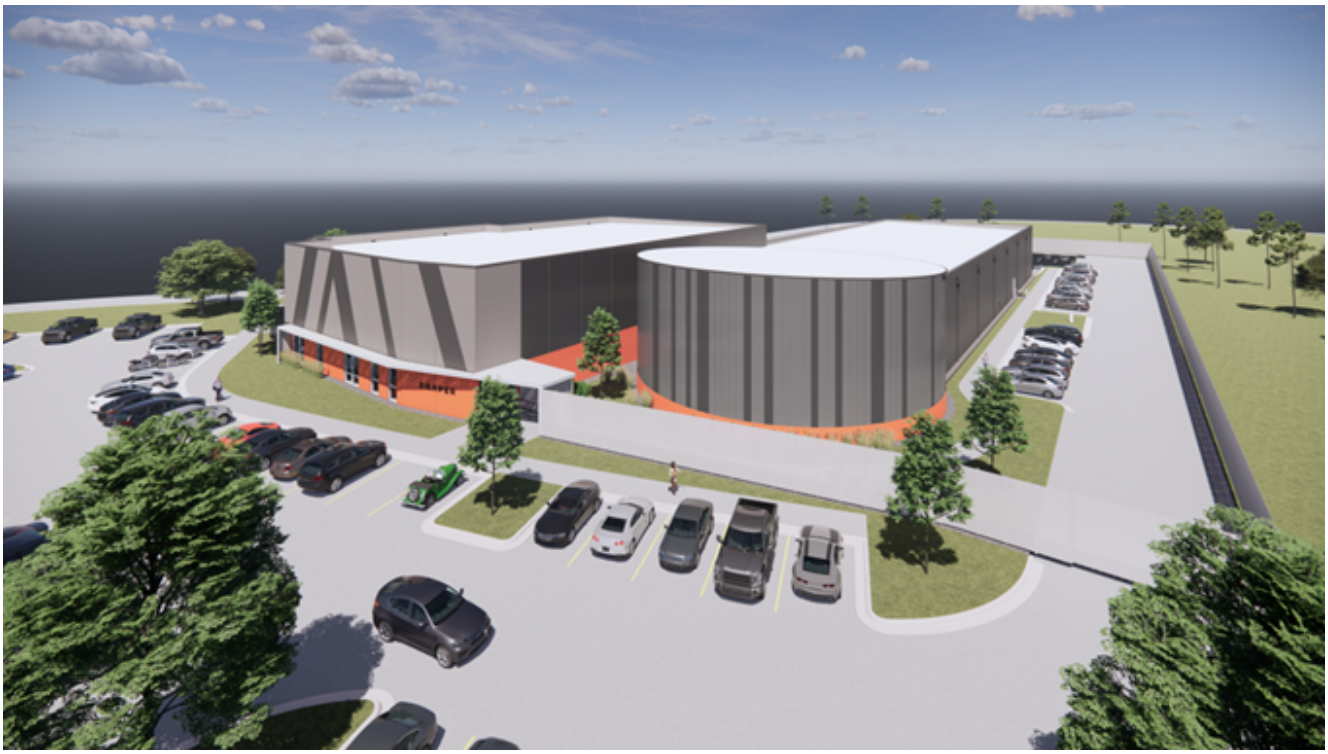
July 29, 2024

TAMPA, Fla.- In the past 24 hours, U.S. Central Command (USCENTCOM) forces successfully destroyed one Iranian-backed Houthi uncrewed aerial vehicle (UAV) in a Houthi-controlled area of Yemen.

It was determined this weapon presented an imminent threat to U.S., coalition forces, and merchant vessels in the region. This action was taken to protect freedom of navigation and make international waters safer and more secure.

Draper Team Completes Critical Design eview Phase

of Strategic Enhanced Ground Test Facility



CAMBRIDGE, Mass.—July 30, 2024—Draper announced today that it has completed the critical design review phase of its Strategic Enhanced Ground Test Facility (SEGTF) located in Titusville, Fla. The SEGTF is the future home to dynamic and environmental equipment for supporting development of U.S. strategic systems.

The review culminates a 12-month design phase and resulted in an approved detailed design of a test facility that meets the requirements for supporting the U. S. Navy's strategic guidance programs and similar efforts at the Department of the Air Force and for various missile defense systems. Site work is expected to commence in July 2024 and be fully operational in 2028.

Draper's Strategic Enhanced Ground Test Facility will house a world-class centrifuge and associated dynamic and environmental test capabilities needed to design and validate

critical guidance, navigation and control technologies. As the U.S. Navy's strategic guidance prime contractor, Draper has designed and supported the guidance system for every fleet ballistic missile deployed since the program began in 1955.

"The SEGTF will provide critical infrastructure to our strategic systems, missile defense and space customers that would otherwise not exist and complements other modernization efforts on the Space Coast," said Dr. Jerry M. Wohletz, president and CEO at Draper. "Successful completion of the CDR phase is testimony to our teams' drive to deliver this essential capability on schedule and on budget for our customer."

The Draper facility will provide core capabilities in simulation, hardware-in-the-loop and system test to enhance Draper's existing 'test-as-you-fly' approach for exquisite guidance components that require high accuracy, reliability and survivability in the harshest of environments.

"The SEGTF team has worked extremely hard for the past year to present a complete design," said Marjorie Quant, chief operating officer at Draper. "Draper is excited to make this state-of-the-art investment to enhance our ability to support critical national security technologies in a facility that's like no other in the nation."

Approximately 50 Draper employees will be initially located in the SEGTF. The long-term vision expands Draper's footprint and includes future expansion to support over 150 employees.

The successful completion of the CDR phase represents a system of systems design of infrastructure and subsystems that together form an enduring strategic enhanced ground testing capability. The CDR is the culmination of a collaboration between Draper, North American Properties, Rush Construction, JRC Integrated Systems, Burns and McDonnell and Ideal Aerosmith across multiple disciplines and seven design reviews

to produce the holistic SEGT CDR.

CNO Visits Indo-Pacific for Second Time, Strengthens Regional Ties

Chief of Naval Operations Adm. Lisa Franchetti, Chief of the Royal Australian Navy Vice Adm. Mark Hammond and Royal Navy Adm. Sir Ben Key, First Sea Lord and Chief of Naval Staff speak on a panel at the Indian Ocean Defense and Security (IODS) Conference, July 24, 2024. During Franchetti's visit to Australia she met with consulate leadership, held a first-ever trilateral Chief of Navy engagement on AUKUS with Chief of the Royal Australian Navy Vice Adm. Mark Hammond and Royal Navy Adm. Sir Ben Key, First Sea Lord and Chief of Naval Staff, and

spoke at the Indian Ocean Defense and Security Conference. (U.S. Navy photo by MC1 William Spears)
From CNO Public Affairs, 26 July 2024

MANILA – Chief of Naval Operations (CNO) Adm. Lisa Franchetti visited Pohnpei, Federated States of Micronesia (FSM); Perth, Australia; and Manila, Philippines, to meet with partner navies, government and military leaders, and attend the 2024 Indian Ocean Defense & Security (IODS) Conference, July 21-26.

The international trip began in Pohnpei, FSM where CNO held an all hands call with Sailors assigned to Naval Mobile Construction Battalion 5 and Marines assigned to Combat Logistics Battalion 13, and thanked them for their hard work and commitment to the region.

“Thank you for serving on the Navy-Marine Corps team in a very strategic location and so far from home. The work that you’re doing here is vitally important to our Nation,” said Franchetti. “We’re never going to do anything alone. We are always going to operate with Allies and partners, and each of you are ambassadors and diplomats for the United States. Your presence and your efforts send a message of deterrence to our adversaries and a message of reassurance to our Allies and partners.”

While in Pohnpei CNO visited the Nan Madol cultural heritage site, held meetings with Amb. Jennifer Johnson, U.S. Ambassador to FSM and Rear Adm. Greg Huffman, commander, Joint Task Force-Micronesia, as well as with FSM Vice President Aren Palik and FSM Secretary of the Department of Foreign Affairs Lorin Robert.

Franchetti then flew with Johnson and Palik to Chuuk, FSM and met with Hon. Mekioshy William, Lt. Gov. of Chuuk. During these engagements, Franchetti emphasized how the U.S. and FSM’s shared commitment to their longstanding defense and

security ties, underpinned by the Compact of Free Association, support freedom, stability, and prosperity in the Indo-Pacific.

"It's an honor to be here at such a historic time in the relationship between the United States and the Federated States of Micronesia," said Franchetti. "We have a longstanding partnership, and the renewal of the Compact of Free Association provides many opportunities for economic prosperity and security for both our countries. It will help advance our shared vision of a free and open Indo-Pacific."

Franchetti then traveled to Perth, Australia to visit HMAS Stirling, which will play a role in Australia's future fleet of conventionally-armed, nuclear-powered submarines as home to Submarine Rotational Force – West, and hold the first-ever trilateral meeting of the AUKUS Chiefs of Navy. Chief of the Royal Australian Navy Vice Adm. Mark Hammond, Royal Navy First Sea Lord and Chief of Naval Staff Adm. Sir Ben Key, and Franchetti communicated their shared commitment to the historic agreement.

"AUKUS is a once-in-a-generation opportunity to bring together the exceptional capabilities of Australia, the United Kingdom and the United States. We will continue to build on our relationship, strengths, and interoperability, while at the same time uplifting the industrial bases of our three countries," said Franchetti. "We will bring to bear the innovative spirit of our three nations while significantly bolstering our posture in the Indo-Pacific, contributing to security and stability, and maintaining the rules-based international order in this critical region and around the globe."

The three Heads of Navy also spoke on two panels at the IODS conference where they discussed AUKUS and Security in the Indian Ocean and Naval Cooperation and Security in the Indo-Pacific.

“The Indian Ocean is a critical waterway for the free flow of resources, trade, and commerce all around the globe,” Franchetti said. “It’s important that we work together as Allies and partners to promote the rules-based international order that has supported freedom of navigation – in all oceans – and our collective prosperity for the last three quarters of a century.”

While at the conference, CNO conducted bi-lateral engagements with her counterpart in the Japan Maritime Self-Defense Force, Adm. Akira Saito, as well as her counterpart in the Republic of Singapore Navy, Rear Adm. Sean Wat.

Following her engagements in Australia, CNO traveled to Manila, Philippines, where she met with Amb. MaryKay Carlson and her U.S. Embassy Manila country team as well as Philippine Secretary of National Defense Gilberto Teodoro, Chief of Staff of the Armed Forces of the Philippines Gen. Romeo S. Brawner Jr., and Philippine Navy Flag Officer-in-Command Vice Adm. Toribio Adaci Jr. While there Franchetti expressed steadfast U.S. support for the Philippines.

“The U.S. commitment to the Philippines is ironclad and our Maritime Cooperative Activities are a testament to the strength and importance of our relationship,” said Franchetti. “I look forward to building on the success of exercises Balikatan and Sama Sama to increase our interoperability and accelerate our capability to support our shared interests in this critical region.”

This was Franchetti’s first trip to FSM, Australia, and the Philippines as Chief of Naval Operations and her second trip to the Indo-Pacific to communicate the strategic importance of this region to the globe.
