HONOLULU — The crew of the Coast Guard Cutter William Hart completed its 39-day patrol over 7,000 nautical miles in Oceania in support of the Coast Guard's Operation Blue Pacific, last week, said the Coast Guard 14th District.

Operation Blue Pacific is an overarching multi-mission Coast Guard endeavor promoting security, safety, sovereignty and economic prosperity in Oceania while strengthening relationships between our partners in the region.

“This patrol had multiple goals, which really displayed the adaptability of our crew,” said Lt. Cmdr. Cynthia Travers, the commanding officer of the William Hart. “While we continued to support international efforts to combat illegal, unreported, and unregulated fishing in the region, we’ve also worked with our partners including New Zealand’s National Maritime Coordination Centre, the nation of Samoa, the National Park Service, and the National Oceanic and Atmospheric Administration on a number of joint endeavors.”

In November, the crew of the William Hart, one of the Coast Guard’s new Fast Response Cutters, participated in the Pacific Islands Forum Fisheries Agency’s Operation Kurukuru, an annual coordinated maritime surveillance operation with the goal of combating IUU fishing.

IUU fishing presents a direct threat to the efforts of Pacific Island countries and territories to conserve fish stocks, an important renewable resource in the region.

Following the successful conclusion of Operation Kurukuru, the William Hart’s crew continued to patrol the exclusive economic zones of the United States, Samoa, Tonga, Kiribati and Fiji to prevent illicit maritime activity.

Upon request from NOAA, the crew visited Fagatele Bay in the National Marine Sanctuary of American Samoa, using the cutter’s small boat to ensure there was no fishing or activity which would damage the coral within the United States’ largest national marine sanctuary.

The crew of the William Hart also supported a National Park Service boat during a transit between Tutuila Island and the Manu’a Islands, providing search and rescue coverage.

The cutter’s crew then departed for Fiji’s EEZ, where they

supported New Zealand’s NMCC by locating an adrift Deep-ocean Assessment and Reporting of Tsunamis buoy and reporting the buoy’s condition to Headquarters Joint Forces New Zealand and other stakeholders.

DART buoys are real-time monitoring systems strategically deployed throughout the Pacific to provide important tsunami forecasting data to researchers.

“These expeditionary patrols are important to the continued stability and prosperity of Oceania,” said Lt. Cmdr. Jessica Conway, a Coast Guard 14th District operations planner. “Partnerships are key to promoting a free and open Indo-Pacific. Operation Blue Pacific allows us to coordinate with regional partners and most effectively employ our assets towards shared goals.”
