

Orange Flag Demonstrates F-35, Army Missile Defense Integration

FORT

BLISS, Texas – Lockheed Martin, the Army Integrated Air and Missile Defense

(AIAMD) Project Office and the U.S. Air Force successfully integrated F-35

track data with the IAMD Battle Command System (IBCS) during Orange Flag

Evaluation (OFE) 19-2 here and at Palmdale, California.

This was

the first-time live F-35 track data has been sent to IBCS via the F-35 ground

station and F-35-IBCS adaptation kit, both developed by Lockheed Martin. This

allowed IBCS to receive and develop fire control quality composite tracks during

the exercise, leveraging the F-35 as an elevated sensor. This capability

enables multidomain operations and the detection of threats that could

challenge ground-based sensors.

“This

demonstration represents a significant growth in capability for the Army IAMD

program and Army for multidomain operations. The capability creates additional

battlespace awareness, and the ability to track incoming targets and take

action, if necessary,” said Scott Arnold, vice president and deputy of

Integrated Air and Missile Defense at Lockheed Martin Missiles and Fire Control.

“The F-35, with its advanced sensors and connectivity, is able to gather and seamlessly share critical information, enabling greater joint force protection and a higher level of lethality of Army IAMD forces.”

This capability further demonstrates the Army IAMD program’s ability to gather sensor data from multiple platforms and is another building block for the future Army IAMD force.

In 2016, the F-35 and Aegis Combat System successfully demonstrated the integration of the F-35 in support Naval Integrated Fire Control-Counter Air (NIFC-CA). The F-35 ground station has been relocated to White Sands Missile Range, New Mexico, to support follow on F-35 integration testing during AIAMD developmental testing.
