

SAIC, HavocAI Partner to Link Autonomous Fleets to Global Command and Control Infrastructure

[Release From SAIC](#)

RESTON, Va., Nov. 19, 2025 (GLOBE NEWSWIRE) – Science Applications International Corp. (NASDAQ: [SAIC](#)), a premier Fortune 500 mission integrator, and HavocAI, the leader in collaborative maritime autonomy, today announced an effort to integrate SAIC’s real-time, multi-domain communications and data backbone with HavocAI’s fully-autonomous, problem-solving fleets. This collaboration will drastically improve maritime domain awareness within the joint, unified warfighting network for the U.S. Navy.

This integration connects HavocAI’s collaborative autonomy stack – which currently powers dozens of autonomous vessels in self-organizing teams with the potential to scale to thousands – to broader command and control infrastructure through SAIC’s advanced Joint Range Extension (JRE) system. JRE extends the range and interoperability of Link 16 (TADIL-J), which enables U.S. armed forces and allied air, ground, and maritime platforms to collect and exchange vast amounts of tactical data in real-time for faster decision-making.

Adding maritime systems enabled with HavocAI’s autonomy to Link 16 can ultimately connect huge, heterogeneous fleets of globally-networked sensors, lethal platforms, and command and control systems to the infrastructure of all military services and allies seamlessly and instantaneously. This meets multiple objectives of the U.S. military’s Combined Joint All Domain Command and Control (CJADC2) effort to close all-domain

kill chains near machine speed and provide U.S. and allied warfighters with unparalleled decision dominance.

“This is a significant leap forward in expanding the capability of large-scale collaborative autonomy,” said Paul Lwin, CEO and co-founder of HavocAI. “By integrating with SAIC’s proven JRE infrastructure, we’re not just connecting our autonomous vessels to existing systems—we’re fundamentally enhancing how autonomous maritime systems receive and provide real-time tactical data within joint and coalition C2 systems.”

“SAIC’s JRE has been the backbone of advanced joint interoperability for two decades and this partnership to bring HavocAI’s innovative autonomous platform into the fold will provide immediate operational value and drive the future of maritime operations for the U.S. Navy,” said Barbara Supplee, SAIC Executive Vice President of Navy Business Group. “The ability to seamlessly integrate dozens of autonomous vessels into our C2 architecture will provide warfighters with an unprecedented level of maritime domain awareness, sea denial, and sea control.”

The integrated solution is being prepared for demonstrations and exercises where HavocAI’s autonomous fleet will showcase its ability to provide real-time situational awareness data through JRE to maritime operations centers, supporting the Navy’s vision for hybrid fleet operations.
