

# U.S. Marine Corps Places First Polaris MRZR Alpha Order on New ULTV Contract

From Polaris Government and Defense

MINNEAPOLIS – June 24, Polaris Government and Defense 2026 – The United States Marine Corps (USMC) has placed its first delivery order to on the [new Ultra-Light Tactical Vehicle \(ULTV\) contract](#), ordering more than 70 MRZR Alphas and numerous accessories vital to mission success. More than half the vehicles ordered were the new 5kW export power variant and the remaining were the standard, 1kW version – all are green, four-seat vehicles.

Polaris accessories included in the order have been commonly incorporated on MRZR Alpha ULTVs for the Marines and include:

- Roof Kit – reversible roof kit with multicam-patterned camouflage on one side and olive drab on the other for mission planning flexibility while protecting occupants

from exposure to the elements.

- Road March Kit – turn signals, horn, rear view and side mirrors to provide operators enhanced auditory and visual situation awareness during off-road administrative movements.
  
- Modular Cargo System – siderails and tailgate enclose the rear deck to contain cargo and provide many attachment points for securing gear and other vehicle accessories. The heavy-duty tailgate can also drop down for additional cargo space in the down position. Aircraft rails are built in for optional accessories, like integration of litter mounts.
  
- Fire Extinguisher – Class 5-BC fire extinguisher can be mounted to the roll cage in various spots, using a vinyl mount secured by two heavy duty Velcro straps with special rubber attached to ensure mount is securely fastened.
  
- Towbar Mount – specifically designed clamps mount a towbar provision for storage during non-use.

“Polaris engineering and development efforts resulted in expanded accessories developed specifically for MRZR Alpha customers, like the Marines,” said Erin Telander, Defense program manager, Polaris Government and Defense. “That includes the ability to export 5kW of power directly from the vehicle itself, which the Marines will be able to leverage with their latest order.”

The MRZR Alpha is Polaris’ most advanced light tactical vehicle, engineered to meet the evolving demands of

expeditionary forces. Designed for enhanced payload capacity, tactical air transport and off-road performance, the MRZR Alpha enables rapid unit deployment and exceptional maneuverability across difficult terrain while reducing logistical demand due to the vehicle's superior durability.

The indefinite delivery, indefinite quantity (IDIQ) contract was awarded May 22, 2026, through Program Acquisition Executive Marine Corps (PAE-MC) and has a ceiling of up to \$98M, with an order period of up to five years. This contract reinforces the value that Polaris brings to the warfighter – a responsive and engaged team with off-road engineering expertise, world-class manufacturing and a built-in global support network.

Commercial platforms like the Polaris MRZR Alpha have been instrumental in accelerating delivery of highly mobile systems to the field. Polaris provides global parts availability through its existing worldwide network of dealers and distributors, empowering greater self-sufficiency for distributed forces.
